

a study on the duration of strong earthquake ground motion ... - the duration of strong earthquake ground motion is one of the main parameters characterizing this natural phenomenon. yet very little has been done, so far, to describe it quantitatively in terms of earthquake magnitude, source-to-station distance and the effects of geological environment. **chapter 2 strong motion and estimation of seismic hazard** - figure 2.1 example of strong motion earthquake record (n-s component of el-centro, 1940 earthquake). the strong ground motion is recorded with the help of accelerometers. when the natural frequency of the instrument is very high compared to that of the vibrations to be **strong earthquake ground motion by g. v. berg and g. w ...** - strong earthquake ground motion 177 el centro, 18 may 1940. this shock has been given a richter magnitude of 7.0 (formerly 6.7). the instrument was somewhat less than 10 miles southwesterly of **controlling factors of strong ground motion prediction for ...** - 13th world conference on earthquake engineering vancouver, b.c., canada august 1-6, 2004 paper no. 2801 controlling factors of strong ground motion prediction for scenario earthquakes hiroe miyake¹, tomotaka iwata², and kojiro irikura³ summary high probability of future earthquake occurrence on active faults in the western biwa lake area in kansai **empirical scaling of strong earthquake ground motion ...** - 258 empirical scaling of strong earthquake ground motion $\frac{1}{v} \propto \frac{1}{v} + 0.5w \frac{1}{v^2}$ (3) where, w is the fault width, l is the fault length, v is average velocity of dislocation, and $\frac{1}{v}$ is the shear wave velocity in the medium surrounding the source. **strong ground motion - university of memphis** - the duration of strong ground motion can have a strong influence on earthquake damage. a motion of short duration may not produce enough load reversals for damaging response to build up in a structure, even if the amplitude of the motion is high. on the other hand, a motion with moderate amplitude but long duration can produce enough duration **4 strong ground motion and fault rupture** - 4 strong ground motion and fault rupture during september 5 to 12, the members of the jsce team for the survey on the strong ground motion and the fault ruptures visited the strong motion observation stations in the earthquake-affected region and measured the shear wave velocities using a portable elastic wave exploration device. **earthquake ground motion selection** - earthquake ground motion selection. i research report . research project t4118, task 69 . earthquake ground motion selection . by ... more accurate characterization of geotechnical and structural response under strong earthquake shaking. bridge and building codes require the evaluation of seismic response for ground shaking levels with ... **a summary of strong ground motions observed in the ...** - christchurch earthquake (mw6.3), and two aftershocks on 13/06/ 2011 (mw5.3 and 6.0, respectively). the dense spacing of strong motions in the region, and their close proximity to the respective causative faults, has resulted in strong ground motions far exceeding the previous catalogue of strong motion observed in new zealand. **strong ground motion in the 2011 tohoku earthquake: 6 7 8 ...** - 58 observation because earthquake vertical component was neglected in structural design codes in 59 the recent past. the vertical to horizontal ratio, previously considered trivial, becomes essential 60 to characterize 3d loading effects and multiaxial stress interaction in strong ground motion 61 modeling. **investigation of the frequency content of ground motions ...** - ground motions. over 300 accelerograms, recorded during the strong vrancea seismic events mentioned above and recently re-digitized, are used in the study. various analytical estimators of the frequency content, such as those based on fourier spectra, power spectral density, response spectra and peak ground motion values are evaluated and compared. **the effect of quaternary alluvium on strong ground motion ...** - the effect of alluvium on strong ground motion can be seen by comparing two strong-motion records of the coyote lake, california, earthquake of august 6, 1979 (m. = 5.9). one record at a site on franciscan bedrock had a peak horizontal acceleration of 0.13 g and a peak horizontal velocity of 10 cm/sec. **frequently asked questions about strong motion** - the motion of a point on the ground during a small or distant earthquake can be so small that only specialized, precision instruments can record it. when the earthquake is larger (or closer), that motion will be larger. when the motion reaches the level where humans can feel it, typically a 1-2 %g, it is often called strong motion. this **welcome to rosa p | earthquake ground motion selection ...** - earthquake ground motion selection. published date: 2012-05-01 ... -structure systems offer the potential for more accurate characterization of geotechnical and structural response under strong earthquake shaking. the increasing use of advanced performance-based design and evaluation procedures will require consideration of long-return-period ...
